Guidelines for Project Poster Creation

2026-2 IBT|ISE Capstone Design Course

For the end-of-semester Demo Day, each team must prepare a professional poster showcasing its capstone project. Posters will be evaluated by professors and industry experts. All teams must present both the technical solution and its business potential. Guidelines apply to both ***hardware-based future mobility projects (Section 1)*** and ***AI/software-based projects (Section 2)***.

I. Poster Content

Include the following sections in your poster. Adapt technical and operational details to your project type.

- **Project Identity:** Product/service name, tagline, team number, and team members' names (identify the team leader).
- **Problem & Solution:** Problem statement, target users, and proposed solution.
- **Product Description & Value Proposition:** Key features, innovation, customer benefits, and competitive advantage.
- **Technology & System Design:** Architecture, flowcharts, diagrams, algorithms, or system workflows, as appropriate.
- **Product Demo & Prototype:** Physical prototype or 2D/3D design for hardware projects; working application, UI screenshots, AI functionality, or software demonstration for AI/software projects. Include a QR code linking to a video demo or working demonstration, where available.
- **Market Research:** Target market, TAM (Total Addressable Market), customer persona, beachhead market, DMU (Decision-Making Unit), competitors, and competitive advantage.
- **Business Model & Pricing:** Selected business model(s), revenue streams, pricing strategy, and key costs.
- **Operations & Delivery:** Manufacturing, component sourcing, distribution, and logistics for hardware projects; software deployment, hosting, data management, maintenance, and technical support for software/AI projects, as applicable.
- **Marketing & Go-to-Market Strategy:** Customer acquisition, promotion, sales channels, and market-entry plans.
- **Intellectual Property & Risk Management:** Relevant IP protection, software/data licensing, privacy, cybersecurity, and key risks, as applicable.
- **Future Development:** Next steps, commercialization plans, and expected impact.

II. Poster Design

- Use the provided PowerPoint (PPT) poster template.
- Write concise summaries in each section; use bullet points, diagrams, and visuals rather than lengthy paragraphs.
- Use clear, high-quality product photos, prototype images, screenshots, and diagrams.
- Ensure consistency with your video presentation and business plan.
- Distinguish completed work and validated results from future plans.
- **Required poster size: 600 × 900 mm.**

III. Important Dates & Venue

- **Poster Submission Deadline:** November 21, 2026 (at least one week is required for poster production).
- **Demo Day Competition:** November 30, 2026, 16:00 - 18:00 (you can come around 15:00 to set up your prototype, etc.)
- **Venue:** 60th Anniversary Building, 월천홀 (Wolcheon Hall).

Your poster should clearly communicate what you have developed, whom it serves, how it creates value, and how it could be implemented as a viable solution. These guidelines apply to all teams, regardless of whether the project involves hardware, software, AI, or a combination of technologies.
