Video Presentation Guidelines

Evaluation Criteria

Your final video presentations will be assessed based on the following criteria:

1. Overall Project Organization
    - ✧ Clarity and structure of the report
    - ✧ Logical flow of information
    - ✧ Proper use of headings and subheadings
2. Product: Prototype UI/UX and System Design Quality
    - ✧ Accuracy and detail in the UI/UX and system design
    - ✧ Usability and functionality of the prototype
    - ✧ Presentation of the design (screenshots, diagrams, etc.)
3. Market Research
    - ✧ Thoroughness and accuracy of identifying the target market
    - ✧ Effectiveness of analyzing and prioritizing beachhead markets
    - ✧ The process and depth of persona development
    - ✧ Analysis of the decision-making unit within target markets
    - ✧ Competitor analysis (+ your competitive advantages)
4. Product Development
    - ✧ Innovation and creativity in product design and features
    - ✧ Market research and validation of customer needs
    - ✧ Quality assurance measures and testing procedures (unit, integration, and usability testing)
5. Technology Process
    - ✧ Number of tasks
    - ✧ Software flow chart and diagram (user flow, data flow)
    - ✧ Software architecture (components, data flow, and external services)
    - ✧ Project implementation quality (issues & solutions, code quality)
    - ✧ Demo of the software application (live or recorded)
6. Business Model
    - ✧ Appropriateness of chosen business model type(s)

- ✧ Effectiveness of cost analysis and budget management
- ✧ Efficiency of pricing framework and strategies

7. Operations
    - ✧ Distribution Channels
        - Effectiveness of third-party dependency management (AI/API providers, cloud services, data sources)
        - Efficiency and effectiveness of distribution strategy (app stores, web access, licensing or subscription)
    - ✧ Deployment & Maintenance
        - Efficiency of deployment and release processes
        - Accuracy and timeliness of usage and cost management (API, compute)
        - Effectiveness of hosting, maintenance, and technical support strategies
8. Marketing

✧ Effectiveness of marketing strategy and its implementation

✧ Utilization of promotional tools and channels to reach target audience

✧ Assessment of the impact of marketing efforts on brand awareness and sales

9. Intellectual Property Management
    - ✧ Effectiveness of intellectual property protection measures
    - ✧ Compliance with intellectual property laws and regulations

Guidelines for Overall Video Presentation

- ✧ Duration: 15-20 min
- ✧ Recording method: Zoom, PPT recording, screen recording, or other tools
- ✧ Participation: All team members must present their respective parts (ensure equal allocation of time for each presenter).
- ✧ Format: MP4 or MOV (or similar standard format).
- ✧ **Content:**
    1. Introduction: Briefly introduce team members and provide an overview of the project.
    2. Project Overview: Briefly describe the project goals and objectives, problem and solution, as well as value proposition.

3. Product Development: Briefly describe innovation and creativity aspects in product design and features.
4. **Prototype Demonstration:** Show the software prototype (UI screens and/or a live run of the main features) and explain its features.
5. Technology and Process: Discuss the technology stack, system architecture, process flow, and implementation.
6. Market Research: Describe the target market, beachhead market, TAM, persona, DMU, your competitors and your competitive advantage(s).
7. Business Model: Describe the chosen business model type(s), cost analysis and pricing framework.
8. Operations: Explain distribution channels, deployment and hosting, maintenance, and technical support.
9. Marketing: Specify your marketing strategies and assess their effectiveness.
10. Intellectual Property Management: Explain how you will protect and enforce your intellectual property rights.
11. Conclusion: Summarize key points and present the final thoughts.

Guidelines for PowerPoint Slides

- **Template:** Use the provided template (PowerPoint format).
- **Number of Slides:** 15 - 20 slides.
- **Design:** Professional and visually appealing slides. Use bullet points, images, diagrams, and charts to convey information effectively.
- **Content:**
    1. Title Slide: Project title, date, team number, team member names and student numbers
    2. Table of Contents: Presentation structure.
    3. Project Overview: Project goals and objectives, problem and solution.
    4. Product Development: Innovation and creativity aspects in product design.
    5. Prototype Design: The UI/UX design (key screens and user flow) and key features.
    6. Technology & Process: Technology stack, system architecture, flow charts, and implementation details.

7. Market Research: Target market, beachhead market, TAM, persona, DMU, your competitors and your competitive advantage(s).
8. Business Model: Business model type(s), revenue streams, cost analysis and pricing framework.
9. Operations: Distribution channels, deployment and hosting, and maintenance.
10. Marketing: Specific marketing strategies and their effectiveness.
11. Intellectual Property Management: Protection and enforcement of intellectual property rights.
12. Conclusion: Key takeaways and final thoughts.
13. References
14. Q&A Slide: Invite questions from the audience.

Submission

- **Submit the PPT file, video files (**MP4 or similar standard format)**, and all source codes related to the presentation via the I-Class.**
- DO NOT upload the video file to YouTube.
- Due date: November 25, 2026, midnight

Additional Tips

- Practice your presentation multiple times to ensure smooth delivery.
- Make sure to adhere to the time limit for the video presentation (20-30 min).
- Ensure that all team members contribute to the presentation.
- Check for clarity, coherence, and technical accuracy in all parts of the project.

PRODUCT DEMO VIDEO:

In addition to your video presentation, you have to create a separate demo video (3-5 min) showing how your software prototype operates (an experiment), recorded as a screen capture of the running application.

Good luck with your Capstone project!
